The *Technical Reports of the Meteorological Research Institute* has been issued at irregular intervals by the Meteorological Research Institute since 1978 as a medium for the publication of technical reports, data reports and comprehensive reports on meteorology, oceanography, seismology and related earth sciences (hereafter referred to as reports) contributed by the members of the MRI and the collaborating researchers.

The Editing Committee reserves the right of decision on acceptability of manuscripts and is responsible for the final editing.

Abstract

Climate change is one of the biggest issues on the earth, and the research on the climate system has been paid much attention today. The behavior of carbon dioxide (CO₂), one of the major green house gases, and its related substances within and among the atmosphere, the ocean and the land biosphere is playing a key role in regulating the climate.

The ocean contains ca. 4×10^{19} g of carbon, which is about 50 times of that in the atmosphere. The change in carbon cycle in the ocean is considered to have a crucial impact on the concentration of CO₂ in the atmosphere. However, little has been quantitatively known about the variability of CO₂ in the ocean and its controlling physical, chemical and biological processes.

The observations of the concentration and carbon isotopic ratio of total dissolved inorganic carbon (TCO₂) in seawater occupy important part of the research on the behavior of carbon in the ocean. In the first part of this report, we describe the fundamental knowledge of CO₂ system in seawater and the method to precisely measure TCO₂ including sampling method, the structure and the operation of the instrument we developed, and the way to assure the quality of the data. We also present some results we obtained in the western North Pacific and the equatorial Pacific. In the second part, we report the methods to collect and treat samples for the analysis of the isotopic ratio of radio carbon (¹⁴C) in the atmospheric CO₂ and TCO₂ in sea water.

目次

1. 電量滴定法による海水中の全炭酸濃度の高精度分析法	1
1-1 はじめに	1
1-1-1 高精度の全炭酸濃度分析の背景と動機	1
1-1-2 装置の性能に関する目標について	4
1-2 炭酸系の気液平衡と化学平衡	5
1-3 全炭酸測定装置	7
1-3-1 装置の概要	7
1-3-2 二酸化炭素抽出装置	8
1-3-3 電量滴定装置	10
(1) 測定原理	10
(2) セル内の配置	12
(3) カソード溶液の寿命	12
1-3-4 定量ガス供給装置	12
1-3-5 薬品	12
(1) ガスシリンダー	12
(2) 薬品	12
1-3-6 装置の自動操作	13
(1) 海水の全炭酸濃度分析の自動操作	13
(2) リン酸ブランク値の測定	15
(3) 標準ガスによる電量滴定装置の性能監視	15
(4) 窒素ガスブランク値の測定	16
1-3-7 各層採水試料の全炭酸濃度分析法	16
(1) 分析作業の流れ	16
(2) 装置の起動	18
(3) 電量滴定セルのセット	19
(4) その他のセットアップ作業	20
(5) リン酸ブランクの測定	20
(6) 採水手順	20
(7) 海水試料の測定	21
(8) 測定終了時の処理	22
(9) 装置の停止	23
(10) プログラムについて	23
1-4 装置のキャリブレーション	24
1-4-1 濃度の計算法	24
1-4-2 炭酸ナトリウム溶液による装置のキャリブレーション	25
(1) 炭酸ナトリウム標準溶液の調製	25
(2) 検量線の作成	27
1-4-3 国際相互比較実験	28

1-5	標準海水の調製と使用	30
1-5-1	使用目的	30
1-5-2	調製方法	32
1-5-3	標定結果	32
1-6	全炭酸濃度の鉛直各層観測におけるデータの品質管理 ～西部太平洋における観測結果を例として	34
1-6-1	観測の概要	34
1-6-2	標準物質によるデータの品質評価	34
1-6-3	重複分析による精度の評価	36
1-6-4	観測結果	38
1-7	表面水の連続採水による自動観測におけるデータの品質管理 ～太平洋中部・西部赤道域における観測結果を例として	39
1-7-1	観測の概要	39
1-7-2	標準ガスと標準海水の分析結果	40
1-7-3	観測結果	42
1-8	全炭酸濃度に関する試料海水の保存実験	44
1-9	塩化水銀(II)含有廃液の処理	46
2.	大気中の二酸化炭素と海水中の全炭酸の放射性炭素同位体比の測定法	47
2-1	はじめに	47
2-2	^{14}C 同位体比の表記	48
2-3	大気中の二酸化炭素の ^{14}C 同位体比の測定	49
2-3-1	試料の採取方法	49
2-3-2	ベンゼン合成	49
2-3-3	液体シンチレーション法による β 線計数	50
2-3-4	二酸化炭素採取装置の性能	50
2-3-5	太平洋中部・西部海域における観測結果	52
2-4	海水中の全炭酸の ^{14}C 同位体比測定	53
2-4-1	測定の手順	53
2-4-2	採水方法	54
2-4-3	二酸化炭素の抽出	54
2-4-4	相互比較実験	58
2-4-5	太平洋西部海域における観測結果	58
	謝辞	60
	参考文献	61
	気象研究所技術報告一覧表	62
